

ONE SCREEN FOR THE WHOLE SHOP.

运营 · 一目了然

A management dashboard made for ZEZU — the people, the stock, the menu, the sales and the shop floor of all three sites, live in one place, built to look and feel like the brand you've already made people love.

PREPARED FOR
**ZEZU — THE MODERN
CHINESE**

SITES
**LODGE LANE · ANFIELD ·
WALLASEY**

PREPARED
BY
POLARITY

THREE SHOPS. ONE HONEST PICTURE.

Right now the answers live in too many places. Who turned up today sits in a group chat. Stock lives in someone's head and a notebook by the fryer. Sales are three platform dashboards and a till roll. Salaries are an end-of-month headache built on memory.

None of that is broken because anyone is careless — it's what happens when a brand grows faster than its paperwork. ZEZU went from an idea to three sites and 20k+ happy customers; the tools behind the counter never got the same upgrade as the food.

We're proposing one private dashboard — on the office screen, the manager's phone, your phone — that always knows: **who's in, what's selling, what's running low, and what everyone is owed.**

It's not software for software's sake. Every screen in this proposal earns its place by replacing a group chat, a notebook, a spreadsheet, or a guess. If it doesn't save a manager time on a Friday night, it doesn't go in.

The pages that follow walk through the six things it will do, what a normal day feels like with it running, and exactly how we'd build and roll it out across Lodge Lane, Anfield and Wallasey — starting small, proving it in one shop, then switching on the rest.

THE SIX MODULES

01 / PEOPLE

EVERY PERSON, SORTED FROM DAY ONE

A profile for every member of staff across the three sites: role, site, contact, documents and pay rate — and one unique 4-digit code each. No usernames, no passwords, nothing to forget. New hires get a ready-made onboarding checklist — documents in, training videos watched, trial shift done — so nobody starts a Friday shift half-set-up. Salaries aren't typed in from memory: they're calculated from the verified hours each person actually worked (more on that on the clock-in page).

THE WIN Month-end pay takes minutes, not an evening — and every number can be traced back to a real shift.

02 / STOCK

KNOW TONIGHT WHAT YOU'LL RUN OUT OF TOMORROW

At close, each site logs the day's usage in under a minute — tap the item, tap how much. The dashboard keeps the running level of everything from chicken to chilli jam, flags what's getting low, and turns the flags into a ready-to-send order list for each supplier. No more discovering at 6pm that the Salt & Pepper Chips are off the menu.

THE WIN Ordering stops being a memory game — and you can finally see which site uses what, and at what pace.

03 / MENU

EVERY DISH, ON FILM

Each menu item gets its own short video — the plate, the portion, the finish — living inside the dashboard next to its recipe notes. New cooks train from it, every site plates the Dragon Chicken the same way, and you quietly build a library of mouth-watering footage the brand can reuse for socials and the website. (Filming is what we do — we'll shoot these with you.)

SALES, THE FLOOR, AND THE CLOCK

04 / DAILY SALES

UBER · TAKEAWAY · DINE-IN, SIDE BY SIDE

Each site enters its day in three numbers — Uber, takeaway over the counter, dine-in. The dashboard does the rest: today vs last week, site vs site, the channel mix, the best and worst days on record. You'll see in one glance whether a quiet Tuesday at Anfield is the weather or a trend — and which channel is actually growing.

THE WIN Decisions about hours, staffing and promos get made on numbers, not vibes.

05 / LIVE VIEW

A MINIATURE OF THE SHOP, IN YOUR POCKET

The dashboard's home screen is a little living picture of ZEZU right now: each of the three sites as a card — who's clocked in on shift at this minute, today's takings so far, any stock flags raised. Wherever you are, ten seconds tells you the whole business is running as it should. When something's off — a shift with no one clocked in, a site that hasn't logged its day — it's visibly off.

THE WIN You stop ringing shops to ask "everything alright?" — the answer is already on your phone.

06 / CLOCK-IN

SCAN IN, VERIFIED BY THE MANAGER, PAID TO THE MINUTE

The manager opens the shop with their code — that's what starts the day. From then on, staff scan the ZEZU-branded QR poster by the door and tap in their 4-digit code to clock in and out; the manager gets a one-tap verification, so nobody clocks in from their sofa. Those verified hours build each person's timesheet automatically — and that timesheet is exactly what the People module uses to calculate salaries.

HOW CLOCKING IN FEELS

1

Scan

Aisha arrives at Lodge Lane and scans the poster by the door with her phone. No app to install — it just opens.

2

Code in

She taps in her own 4-digit code — no username, no password. One tap more: "Start shift." Quicker than tying an apron.

3

Verify

The manager's screen shows "Aisha — clock-in, 16:58". One tap to confirm she's actually here.

4

Paid right

At month end her verified hours × her rate are already added up. Nothing typed, nothing argued.

...AND HOW A DAY RUNS

10:45

The manager opens Wallasey.

Their code starts the day — the shop can't open without them. Your live view flips Wallasey to "open", and crew clock-ins start landing for their one-tap verification.

12:30

Delivery arrives.

New stock is logged in as it comes off the van — thirty seconds, and the running levels update.

17:00

Friday rush builds.

Evening crew scan in one by one. You watch all three sites staff up from your sofa — no calls made.

22:40

Close-down.

Each manager logs the day's usage and the three sales numbers. Two minutes each, then lights off.

23:00

Your phone.

The whole day in one card per site: takings by channel, hours worked, and tomorrow's order list already drafted.

IT WILL FEEL LIKE ZEZU, NOT LIKE SOFTWARE

We're building this on your design language — the red, the gold, the bold condensed type, the attitude. When a new hire opens their onboarding, or a manager checks the live view, it should feel like the same brand that made the shop worth queuing at.

NO USERNAMES. NO PASSWORDS. ONE CODE EACH.

Everyone at ZEZU carries exactly one thing to remember — their own 4-digit code. What that code opens depends on who you are:

CEO

EVERYTHING · EVERY LOCATION

The whole picture: all sites' live views, sales, stock, people and salaries — plus the change log of who did what, when, anywhere in the business.

MANAGER

THEIR LOCATIONS ONLY

Opens the shop, verifies clock-ins, logs the day's stock and sales, runs their crew. A Lodge Lane manager sees Lodge Lane — nothing else, no accidents.

STAFF

SCAN THE QR · CODE IN

Clock in and out, see their own shifts and hours, watch the menu and training videos. Nothing to manage, nothing they shouldn't see.

- ✦ Every change is logged with a name and a time — quiet accountability, no drama.
- ✦ Someone leaves? Their code is switched off in one tap, effective that second.
- ✦ Phone-first for staff, big-screen mode for the office wall; every daily task designed to take under two minutes.

正宗 · 现代 · 利物浦

A NEW LOCATION IS A SWITCH-ON, NOT A PROJECT

ZEZU grows by franchise — so the dashboard is designed from day one to be copied. Everything that makes a shop a ZEZU shop — the menu, the dish videos, the training, the stock lists, the way a day is run — lives in one brand library that every location inherits. Opening the next site looks like this:

1

Name the site

The new location appears with its own card on the live view, its own sales and stock ledgers — empty and ready.

2

Print the posters

Its own ZEZU QR posters come out ready to frame. Scanning them clocks staff into that shop and no other.

3

Set the codes

The franchise manager gets a code scoped to their location; crew get theirs as they're onboarded.

4

Open the doors

Menu, videos, training and stock lists are already there — inherited from the brand library, day one.

Same brand, same standards, same screen — **whether it's shop three or shop thirty.**

Franchisees run their own shop and see their own numbers — and only theirs. You see all of them, side by side, on the same live view: which locations are open, how each is trading today, and whether the brand standard is being kept everywhere it carries the ZEZU name.

SMALL START, FAST PROOF, THEN ALL THREE SITES

P1

WALK THE SHOPS & DESIGN

We shadow a real shift at Lodge Lane, map how stock, staff and sales actually move, then design every screen in your brand.

YOU GET Clickable designs of the whole dashboard to approve before anything is built.

P2

THE CORE: PEOPLE, CLOCK-IN, SALES

The backbone first — staff profiles, the QR clock-in with manager verification, daily sales entry, and the live view fed by both.

YOU GET A working dashboard your managers can genuinely run a day on.

P3

STOCK & THE MENU ON FILM

Daily usage logging, levels and order lists go live — and we come in and film the full menu, dish by dish, for training and the brand library.

YOU GET The ordering headache gone, and every dish captured properly on video.

P4

PILOT AT LODGE LANE

Two weeks with the real crew. We watch where people hesitate, fix it that week, and tune salaries against a real month-end.

YOU GET Proof — one site running entirely on the dashboard, staff onboard and comfortable.

P5

ALL THREE SITES — AND THE FRANCHISE PLAYBOOK

Anfield and Wallasey switch on with posters, codes and a short hands-on session per crew. The same switch-on becomes your standing playbook for every franchise location that follows. Then we stay close, watching how it's used and refining.

YOU GET The whole of ZEZU on one screen — and every future location a switch-on away.

ALL WE NEED TO START

- ✦ The staff list and pay rates for each site — even rough, we'll tidy together.
- ✦ The menu as it stands, and your supplier list for stock.
- ✦ One "champion" manager per site to sanity-check what we design.
- ✦ An hour with us during a Friday rush — the dashboard should be designed where it'll be used.

ONE BITE IS NEVER ENOUGH.
ONE SCREEN IS.
